

**An ideal solution
for broadcaster and advertiser!**

RadioStreamer™ is an innovative professional FM/AM tuner with built-in IP codec, it receives FM/AM audio and live feeds to FMS (Adobe Flash Media Server) or RED5 in FLV format, it can also encode audio into MP3 file and store them on the SD card in the machine and the files will be uploaded onto the FTP servers automatically.

Two independent tuner and streamer units can be installed in one 1RU RadioStreamer™ box. Built on embedded system RadioStreamer™ has more reliability than any PC based receiving/streaming system, and much lower TCO (Total Cost of Ownership) and very little need of maintenance.

With Adobe FMS/RED5 media server you can hear all the stations streamed on the network just like they are local ones, and you will have all the sound files of the programs you want, in your server.

Specifications

| | |
|------------------|--------------------|
| Band FM | 64-108MHz |
| Band AM | 520-1710KHz |
| Band SW | 2.3-26.1MHz |
| Band LW | 153-279KHz |
| RDS | Supported |
| Onboard memory | 2GB SSD |
| Encoding | MP3 |
| Bitrate | 64-192Kbps |
| Headphone | One for each tuner |
| Loudspeakers | One for each tuner |
| Scheduled tuning | Supported |
| Time sync | NTP protocol |

| | |
|-----------------|---------------------|
| Upload schedule | Supported |
| Stream schedule | Supported |
| Field strength | Supported |
| Network | RJ45 and WIFI |
| Field strength | Measured |
| Bitrate | 64-192Kbps |
| Configurability | Front Panel and Web |
| Stream protocol | RTMP family |
| Upload protocol | FTP |
| Network | RJ45 and WIFI |
| ADSL(PPPoE) | Supported |
